Envision®
Project Verification

Collaborate. Document. Validate. Achieve.

SHOWCASE YOUR PROJECT'S VALUE WITH ENVISION VERIFICATION

It is one thing to say that an infrastructure project is sustainable and resilient, fights climate change, addresses environmental justice, creates local jobs, and spurs economic recovery, it's another thing to prove it. Envision verification provides that proof.

Verification is an objective, evidence-based approach that lends credibility to your project, and it showcases that the project is aligned with your community's needs and expectations.

Infrastructure owners, their consultants, and contractors who engage in the verification process feel a sense of accomplishment by demonstrating their work's ingenuity. There are "aha" moments that will change individual and team perspectives and lead to valuable insights for future projects.

Envision verification focuses on collaboration among internal and external project stakeholders to advance industry best practices and promote innovation.

WHY SEEK VERIFICATION?

- Verification demonstrates that your project meets environmental, social, and economic standards.

- Exhibits accountability, improves project management processes, and elevates learning opportunities for stakeholders.

- Satisifies local, state, provincial, and federal regulatory requirements.

VERIFICATION BENEFITS

Instills confidence in ratepayers and taxpayers that their money is being well spent.

Encourages and rewards industry best practices, inclusive engagement, and sustainable performance to bolster community confidence.

Helps teams clearly define and document their sustainable, resilient, and equitable achievements.

Extends learning opportunities and knowledge of sustainable practices and processes.

Promotes collaboration and provides opportunities for better dialogue, innovation, and critical thinking.

COMMUNITY CONTRIBUTIONS

Creates jobs & stimulates the economy.
Is cost-effective & leads to long-term operational efficiencies.

Leads to significant reductions in GHG emissions & achieves carbon-neutral targets.

Reduces water & energy usage.
Encourages sustainable material use.

Promotes social equity and community cohesion.
Improves public health, safety, and access to essential services.

Protects and restores habitats.

VERIFICATION PATHWAYS

There are two verification pathways: Pathway A allows you to pursue Envision verification during a project's design phase. Pathway B allows you to purse verification after construction is complete.

| Create File Self Assess | Register | Start Verification | Design Review | Award | Post-Construction Review | Complete |

| Create File Self Assess | Register | Start Verification | Post-Construction Review | Award | Complete |

ENVISION AWARDS

Award levels are based on the percentage of applicable Envision points attained in verification.
